Polylac is an ecological multi-layered decorative panel, with the highest scratch and heat resistance on the market. It also has the highest gloss level in the industry with a mirror-like reflection.

Polylac panels are made by pressing a high-density decorative paper to MDF. A specially developed bio-optimized transparent PET film is then

laminated on the surface to protect it from external factors. The surface can be glossy or matte depending on the PET to be used.

Polylac can be used in the kitchen, bathroom, living room, bedroom, hotel furniture, office furniture and wall panel applications.
